Summary

Self-taught Full-Stack Web Developer with 1 year of professional experience as a Software Developer, specializing in Next.js, React, TypeScript, Node.js, MySQL, Prisma ORM, and REST APIs. Experienced in developing highly interactive, multi-user web applications with complex database systems supporting 1,000+ users and integrating NFC technology. Detail-oriented and adaptable with strong analytical and problem-solving skills, capable of working independently or collaboratively to deliver productive and scalable web solutions.

Professional Experience

03/2026 – Present
Las Piñas, Philippines

OnTap Creatives, Software Developer

- Solely responsible for migrating and restructuring data from a legacy system into the new production system, overcoming an inconsistent and loosely related legacy database structure while preserving data integrity and relationships.
- Analyzed and reverse-engineered the legacy database to identify relationships and dependencies between poorly structured records, developing data mapping and migration processes to prevent orphaned records and maintain accurate relationships across the new system.
- Designed and executed data migration workflows to transfer, transform, validate, and reconcile legacy records with the new database schema, ensuring critical user, product, transaction, and business data remained properly associated.
- Independently migrated the company's existing media assets to **Cloudflare R2**, systematically matching uploaded files to their corresponding records and storing the resulting media URLs in the appropriate user and system records.
- Primarily responsible for designing, developing, and maintaining backend APIs and server-side functionality using **Next.js, Node.js, TypeScript, MySQL, Prisma ORM, and REST APIs**.
- Develop and maintain APIs supporting user management, products, inventory, orders, transactions, role-based operations, and other core business processes for a system serving **1,000+ users**.
- Implement application security controls including **CSRF tokenization, Role-Based Access Control (RBAC), CORS configuration, authentication and authorization, session management, and short-lived and long-lived token strategies**.
- Design and maintain secure session and caching mechanisms to improve application performance, reliability, and authentication workflows while protecting sensitive application resources.
- Integrate **Xendit** payment services and develop backend payment workflows for processing and managing e-commerce transactions.
- Implement **Cloudflare R2** as scalable media storage infrastructure and integrate media management into backend workflows and database operations.
- Develop scheduled **cron jobs** for automated background processes, including email notifications and recurring system tasks.
- Identify and remediate vulnerabilities in application dependencies and installed packages, applying security updates and fixes to reduce potential attack vectors and prevent system compromise.

- Conduct API testing, debugging, security assessments, vulnerability remediation, performance optimization, and production troubleshooting to maintain system reliability and security.
- Manage Git/GitHub repositories and support production deployment, maintenance, feature releases, and system updates through **Vercel and Hostinger**.
- Independently translate business requirements into technical solutions and take ownership of backend development, database architecture, migration, security implementation, third-party integrations, testing, deployment, and ongoing maintenance.

08/2025 – 12/2025
Las Piñas, Philippines

OnTap Creatives, Web Developer - Intern

- Independently developed and transformed the company's static landing website into a fully functional, production-ready e-commerce web application using Next.js, React, TypeScript, Tailwind CSS, MySQL, Prisma ORM, and Framer Motion.
- Designed and implemented core e-commerce features, including product catalog, search and filtering, shopping cart, checkout, payment integration, inventory management, user authentication, order management, and an administrative dashboard.
- Developed and integrated complex RESTful APIs and backend functionality to support product, user, inventory, order, and payment operations.
- Conducted debugging, security testing, performance improvements, and feature enhancements to ensure system reliability and usability.
- Managed the project using Git/GitHub and deployed the application using Vercel and Hostinger.
- Delivered a production system that continues to be actively utilized by the company, improving product presentation and simplifying the customer ordering and payment process.

Education

08/2022 – 07/2026
Muntinlupa City,
Philippines

Bachelor of Science in Information Technology, Pamantasan ng Lungsod ng Muntinlupa

Developed a strong foundation in software development, web technologies, database management, and information systems, with hands-on experience applying programming concepts to real-world projects.

Projects

03/2026 – Present

OnTap Portal System , *NFC Digital Business Card Management Platform*

Full-stack web platform for managing **NFC-enabled digital business cards (BizCards)**, user profiles, business information, contacts, and digital portfolios. Built with **Next.js, React, TypeScript, Node.js, MySQL, Prisma ORM, and REST APIs**, with support for multiple user roles, product and inventory management, analytics, inquiries, authentication, and NFC-based contactless sharing. Designed to provide users and businesses with a centralized platform for creating, managing, and sharing professional digital identities across devices.

07/2026 – 08/2026

RÖK Provenance, *NFC Product Authentication & Provenance Platform*

Enterprise NFC product-authentication platform built with **Next.js, TypeScript, Prisma, MySQL, Redis, BullMQ, and Polygon L2** for the luxury sector. Implements **NTAG 215 and NTAG 424 DNA cryptographic verification, fraud and risk detection, RBAC, JWT authentication, CSRF protection, event sourcing, and blockchain-anchored audit logs** to provide secure and verifiable product provenance. Includes NFC provisioning, payment and supplier integrations, anomaly management, administrative workflows, and automated background processing.

01/2026 – 03/2026

AI Docu , *AI-Powered Documentation Management Platform*

AI-powered documentation management platform built with **Next.js, React, TypeScript, Prisma, MySQL, TipTap, JWT, and Tailwind CSS**. Enables users to create, organize, edit, and export detailed project documentation, with AI-assisted processing that analyzes system information and generates structured technical documentation. Includes rich-text editing, syntax highlighting, secure authentication, protected routes, RESTful APIs, project management, email verification, password recovery, and multi-page **PDF export**.

10/2025 – 06/2026

SmartSpecs , *AI-Powered PC Component Recommendation Chatbot*

AI-powered PC building assistant built with **Next.js, TypeScript, React, Prisma, MySQL, and OpenRouter**, providing personalized PC component recommendations based on user budgets, use cases, and upgrade requirements. Features real-time conversational recommendations, component search and alternatives, multi-tier builds, persistent chat history, email/Google authentication, responsive UI, and secure REST APIs. Converted the original PHP system to a modern **Next.js and TypeScript architecture** with improved performance, type safety, and maintainability.
